Brain injury is everywhere!

Can you think of a famous athlete who retired because of a head injury or too many concussions?

Has anyone ever spoken to you about a blow to the head, or even a bump from a fall or a lump from walking into a door?

Here are some phrases that a child or an adult may use after a brain injury: Had a concussion, Had my bells rung, Had my lights dimmed, Head injury, Knocked out, Fainted, Mild head injury, Moderate head injury, Put my lights out, Saw stars, Severe head injury, Shaken baby syndrome, Woozy in the head.

What is a brain injury?

A brain injury means brain function was damaged by an event that decreased oxygen or blood to the brain. Some injuries result from physical trauma (TBI). These events are so common that people take them for granted, never realizing that problems accumulate. Eventually, the damage may equal a disability. Any brain injury requires attention. Use caution to prevent a "Second Hit". Humans are not super heroes.

What are some causes?

Alcoholism, Anesthesia, Aneurysm, Beating or a punch, Bicycle crash, Blow to the head, Brain infection, Brain radiation, Brain surgery, Brain tumor, Cardiac arrest, Cardiac surgery, Drug reaction, Electric shock, Explosion, Gunshot, Falling, Hemorrhage, High fever, Impact, Lightning, Motor vehicle crash, Near drowning, Near suffocation, Poisoning, Shaking, Skateboarding crash, Skiing crash, Stroke, and Whiplash

What are some effects?

Old or new, a brain injury may cause trouble with following directions or understanding events. Remembering or answering questions may be difficult. There may be problems with walking, swallowing, seeing, hearing, confusion, agitation, depression or anxiety, reading, writing and/or math. There may be unusual reactions. "Not themselves." Accommodations are needed. There is a "new normal."

What are some signs?

Tracheotomy scar at the base of the throat. Scars or depressions on head, face or neck. Slurred or slow speech. Uneven eye movements. Trembling or shaking. Fatigue. Gait. Paralysis.

You Can Help!

1. Speak more slowly.
2. Plan for safety.
3. Expect short answers.
4. Reduce stimulation.
5. Arrange frequent rest breaks.
6. Offer simple choices.
7. Minimize noise.
8. Remain close by.
9. Coach using small steps, cards.
10. Give shorter/easier tasks.
11. Simplify responsibilities.
12. Gently change the subject.
13. Assure quiet times.
14. Help carry out interests.
15. Remain calm.
16. Simplify the situation.
17. Promote using a memory book.
18. Promote using a date book.
19. Use pictures or remind.
20. Explain what is happening.
