Greetings!

You are now one of the 21 million Americans who live with the effects of brain injury. If you are like most, you will continue to improve each year and build a life of meaning, joy and value. Here are some tips and strategies from survivors who faced a similar journey toward recovery.

The recovery journey

We all start at different places and have a unique list of challenges but the process is similar:

1. Be aware of your surroundings
2. Understand your limitations
3. Re-learn what you can
4. Learn to work around your limits
5. Learn about assistive technology
6. Do as much as you can yourself
7. Get help from people you trust
8. Be kind to yourself and others
9. Enjoy something every day
10. Put safety first
11. Give yourself credit for trying
12. Take responsibilities seriously
13. Promise what you can deliver
14. Never give up!

Signs of Success

You will usually be calm, content and eager to start your day. Setbacks will be seen as inevitable but temporary.

Maximize your success

- Focus on effort, not outcome.
- Don't create a timeline.
- Set success at 10%.
- Rest before & after effort.
- Drink water, eat regularly, rest.
- Live gently within your limitations.
- Focus on easy activities.
- Celebrate every achievement.

Progress is slow

When you first start new activities, familiar activities may not go as well. While your brain is "defragging" for efficiency, you will need to rest. When your brain is repairing deep structures, progress is hidden (a plateau) but leads to sudden improvement.

Novelty, intent, passion

Much to everyone's surprise, interesting activities increase the number of brain cell connections, no matter what the age of the person.

Mindless activities don't help, so pursue activities you are passionate about. Revisit old hobbies and try new ones. Work with focus and intent on web links and workbooks you enjoy. Read "The Brain That Changes Itself" by Norman Doidge, M.D. Try out www.givebackorlando.com.

What Help is Needed?

Your determination controls the outcome to a great extent, but professionals can assist. They can help you identify your strengths, decide what to work on, choose strategies and break activities down into small, easy steps. Keep a good match between your progress and the skills of your current brain injury rehabilitation provider.

Your attitude is the key

Don't waste energy on unproductive lines of thought. Stay positive, hopeful and determined. You have a future! You are moving forward every day. Surround yourself with positive people and focus ahead.

Conflicting opinions

When you don't know what to do next, or when your rehabilitation providers don't offer clear direction, remember that the correct path will give you a sense of satisfaction and encouragement.
